COMPRESSED AIR TREATMENT

REDEFINED

OIL-X

COMPRESSED AIR FILTERS

Parker domnick hunter OIL-X; a new series of compressed air filters, taking efficiency to a different level.

Built on Parker's worldwide expertise in filtration, the OIL-X range has been developed to ensure consistent outstanding air quality, guaranteed for 12 months - and third-party validated to meet ISO 8573-1.

MARKET LEADING LOW DIFFERENTIAL PRESSURE

Combining the unique filter element with a specially designed advanced air flow management system, the Parker domnick hunter OIL-X range is engineered to not only deliver air quality in accordance with ISO 8573-1 classifications, but it does so with a extremely low differential pressure - ensuring maximum efficiency and productivity.

Unique filter element

Specially constructed for reduced air flow velocity, reduced pressure loss, increased dirt holding capacity, and improved efficiency. Includes a 12-month air quality guarantee.

Flow management system

Specially engineered 'bell mouth', with 90-degree elbow, flow distributor and conical flow diffuser, to promote a consistent, optimum air flow.

Filter housing

Designed to allow easy maintenance and element replacement, and covered by a 10-year guarantee.

Flexible connections

A wide range of port sizes and filter connections, for added flexibility.

Epoxy coating

Finished with alocrom corrosion protection and a tough, dry powder epoxy coating for a high quality feel.

Correction Factors

Please apply these correction factors to flows other than 7 bar g (102 psi g) .

15	218	0.71
16	232	0.68

Applying Correction Factors

To correctly select a filter model, the flow rate of the filter must be adjusted for the minimum operating pressure of the system.

1. Obtain the minimum operating pressure and maximum compressed air flow rate at the inlet of the filter.
2. Select the correction factor for minimum operating pressure from the CFP table (always round down e.g for 5.3 bar, use 5 bar correction factor)
3. Calculate the minimum filtration capacity : Minimum Filtration Capacity = Compressed Air Flow Rate x CFP
4. Using the minimum filtration capacity, select a filter model from the flow rate tables above (filter selected must have a flow rate equal to or greater than the minimum filtration capacity)
